Abstract (Basic): NL 8005713 A

Flame-retarding compsn contains (a) 70-98 wt% of organic polymer, (b) 1-10% of siloxane, and (c) 1-20% of a salt of a Gp IIA metal and a 6-20C carboxylic acid. Pref polymers are the claimed polymers are polyethylene, polypropylene, high- impact polystyrene, and polycarbonates.

A metal conductor insulated with the compsn is claimed. Other uses include casings for household goods, interiors of automobiles, motors, electric components, coffee machines, and pump housings. Use of Pb cpds is avoided.
